

## Tips and Tricks – jQuery Smart Codes

Tip	Description
Preloading images	<p>Use preloadImages() function for preloading images:</p> <pre>\$(document).ready(function() {   jQuery.preloadImages = function(){     for(var i = 0; i   ").attr("src", arguments[i]);   } } // how to use \$.preloadImages("image1.jpg"); });</pre>
Disable right-click	<p>Use the following code to disable right-click functionality:</p> <pre>\$(document).ready(function(){   \$(document).bind("contextmenu",function(e){     return false;   }); });</pre>
Set a Timer	<p>Use the following piece of code to set a timer using jQuery:</p> <pre>\$(document).ready(function(){   window.setTimeout(function(){     // some code   }, 500); });</pre>
Check if an Element Exists	<p>Use the following code to check if an element exists:</p> <pre>if (\$("#someElement").length){   //The DOM element exists } else{   //The DOM element doesn't exist }</pre>
Get the mouse cursor x and y axis	<p>Use the following code to retrieve the x and y axis values of the cursor position:</p> <pre>\$(document).ready(function() {   \$().mousemove(function(e){     //display the x and y axis values inside the div with the id XY     \$('#XY').html("X Axis : " + e.pageX + "   Y Axis " + e.pageY);   }); });</pre>
